

For MSPs and managed-network providers

REAP for MSPs and managed-network providers

Evidence-backed investigations for your tier 1 and one console for many customer estates.

Through you, network assurance reaches smaller businesses.

REAP is the agentic AI platform for network operations — the reasoning and assurance layer above the tools you already run.

THE JOBS

1

Resolve more at tier 1 so senior engineers stop absorbing every escalation

2

Show each customer what changed and what was done, with the evidence

3

Run more customer networks per senior engineer without hiring ahead of revenue

HOW REAP HELPS

Status in the September 2026 release

- The Investigation Window and diagnostic runbooks that work the same way on every customer estate **Available**
- A multi-organization console for switching between customer estates **Available**; per-operator customer scoping **In development**
- Before-and-after evidence on a real change window **Pilot deliverable**; posture findings for each customer **Available**

HOW TO START

Bring one customer estate and its last P1: in a 30-minute session we walk through how REAP would have investigated it, evidence first. The partner pilot runs 60 days across 3 to 5 of your customers, one production domain each.

→ **The partner pilot.** It is measured on the same 8 scorecard categories as an enterprise pilot and reported per customer. Resell REAP, refer it or run it inside your managed service; the pilot fee is credited against the first-year agreement.

PROOF, HONESTLY

- REAP runs today with design partners and has no public customer references yet; named references follow only with measured results and written agreement.
- Under 4 minutes to detect a high-impact incident, under 5 minutes to an evidence-backed root cause and 30% lower network operations cost are design targets from REAP's reference architecture; a proof of value measures them on your network.

Read-only by default · approval-gated writes · SSO, RBAC, audit logging: Available · SOC 2 Type II: In process
